THE PATH OF A PAIN PILL

Manufacturers

The oxycodone pills' journey begins at Mallinckrodt Pharmaceuticals. The tablets are created and packaged in a facility in Hobart, N.Y.

Distributors

Mallinckrodt sends the pills to a network of distributors like Sunrise Wholesale and KeySource Medical. The distributors then supply the drugs to retailers.

Retailers

Retailers such as pharmacies and hospitals dispense drugs that doctors prescribe to patients. Some retailers have been accused of illegally diverting oxycodone.

Patient

When patients pay in cash or receive an unusually high volume of oxycodone, that can be an indication of abuse or diversion of the pills to the black market.

Endo Pharmaceuticals	297,306,324	0.4%

At height of crisis, Walgreens handled nearly one in five of the most addictive opioids

The company acted as its own distributor and, according to a lawsuit, failed to report suspicious orders of pain pills and prevent diversion to the black market.

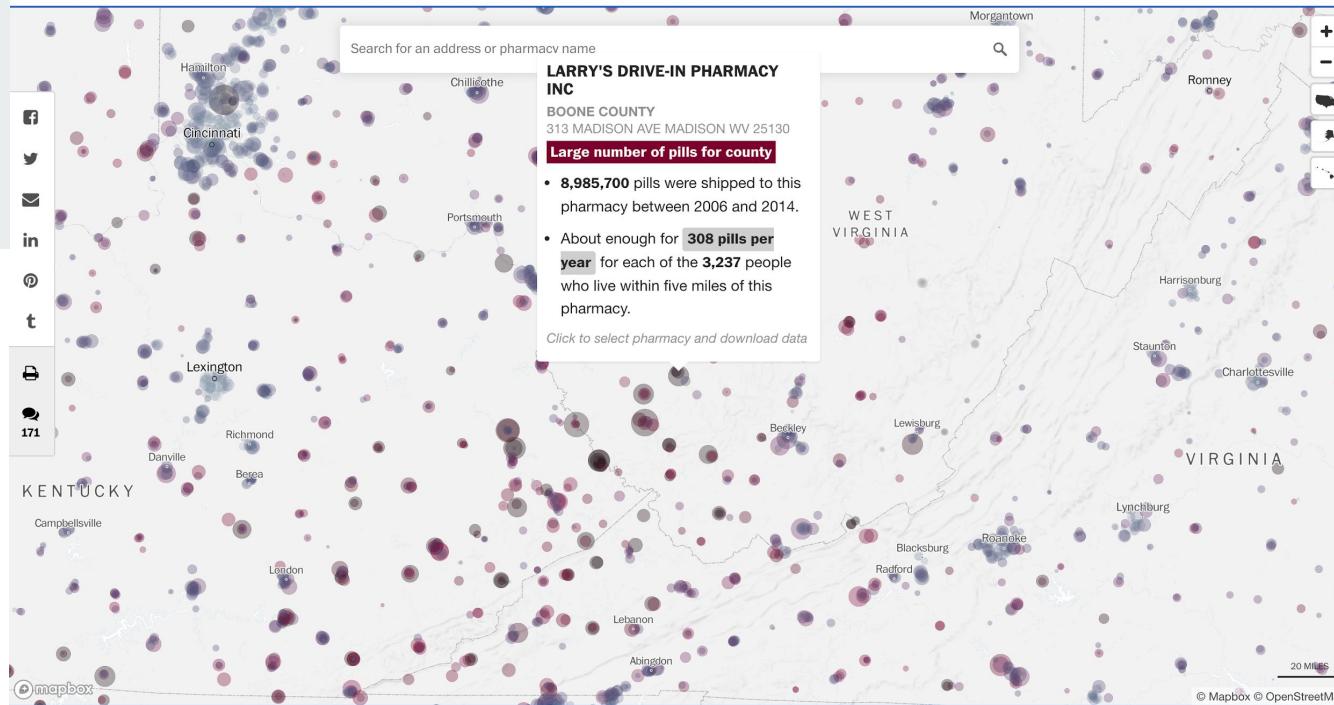

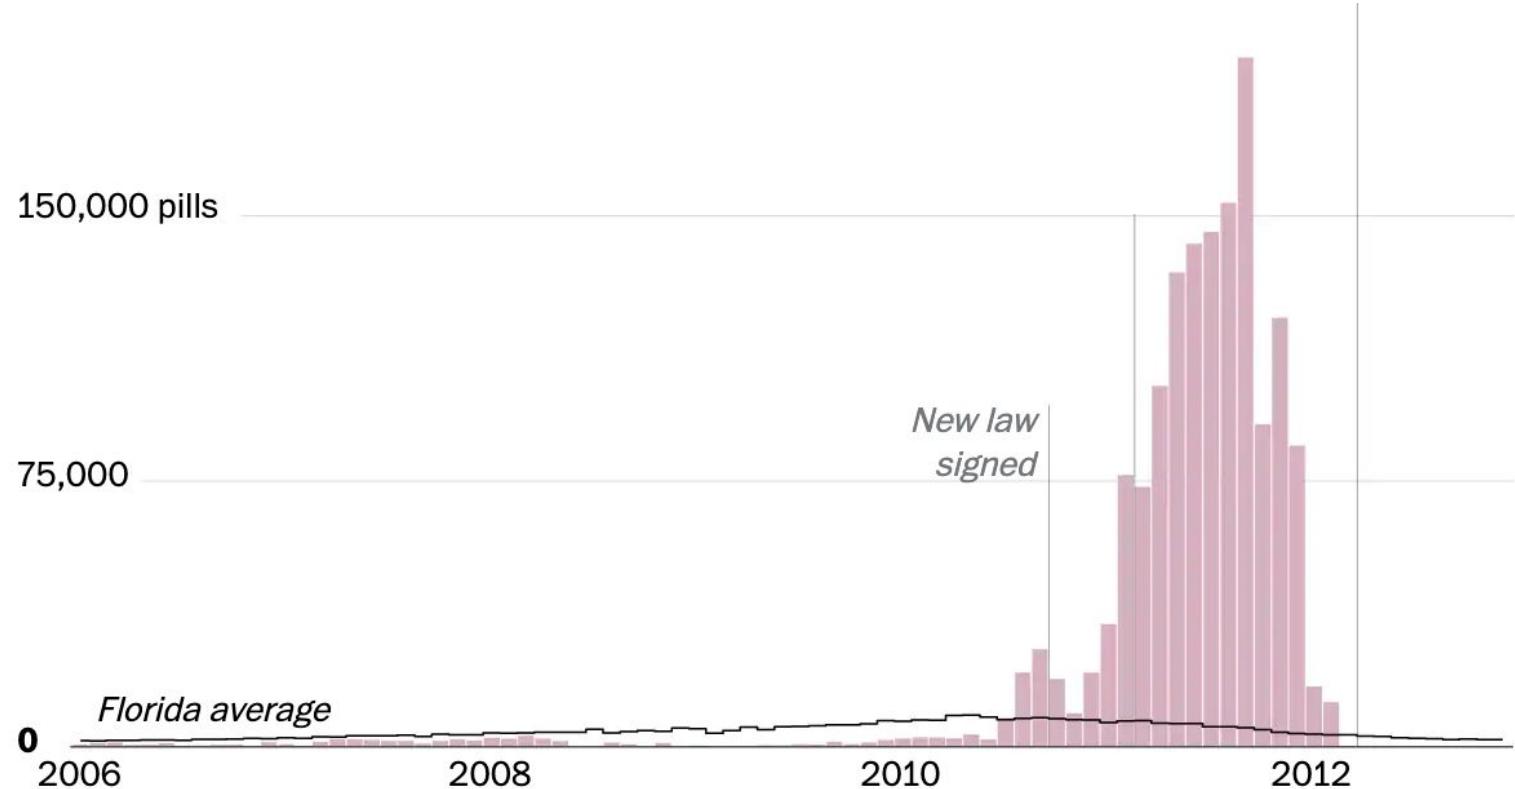

THE OPIOID FILES

Circles in the map are scaled by the **total number of pills** shipped to each pharmacy from 2006 through 2014.

Circles are colored by the total number of **pills per person within a five-mile radius of the pharmacy per year.***

The Oviedo police chief wrote to Walgreens executives that stores had “become a bastion of illegal drug sales and drug use.”

Project description

arcospy

build passing

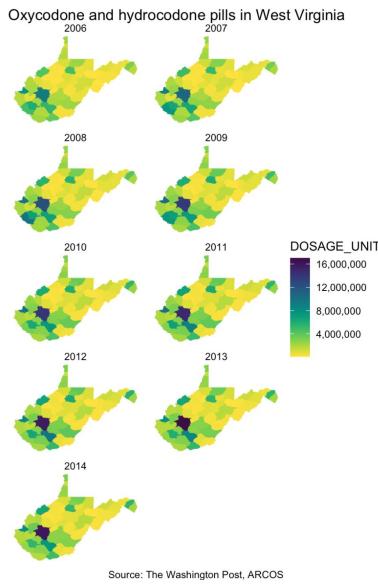

Introduction

Welcome to `arcospy`, the python version of the R `arcos` package maintained by *The Washington Post*. `arcospy` is the result of a R-to-python translation project carried out at the University of Maryland in the Fall of 2019. The project was motivated a *Washington Post* data-driven [story](#) on a large pain pill database recently made publicly available.

The `arcospy` module was built to offer the exact same functionality as `arcos`, with the only difference being the ability to run the API calls in `python`! All of the commands in `arcospy` inherit the names from the original commands in `arcos`. Both `arcos` and `arcospy` act as wrappers for the [DEA ARCOS dataset](#).

All functions

arcos	arcos package
buyer_addresses()	Get DEA designated addresses for each pharmacy based on BUYER_DEA_NO (Only includes retail and chain pharmacy designations)
buyer_details()	Get monthly summarized pill totals by county
buyer_list()	Get list of business types listed in the BUYER_BUS_ACT in the ARCOS database
combined_buyer_annual()	Get annual total pills for each buyer (pharmacy, etc) in a county
combined_buyer_monthly()	Get annual total pills for each buyer (pharmacy, etc) in a county
county_list()	Get dataframe of counties, states, and fips codes that are represented in the ARCOS data
county_population()	Get annual population for counties between 2006 and 2012
county_raw()	Download raw prescription data for specified county (by state and county names) into R
county_raw_fips()	Download raw prescription data for specified county (by county FIPS code) into R
drug_county_biz()	Download raw prescription data for individual drugs and business type by county into R
drug_fips_biz()	Download raw prescription data for individual drugs and business type by county FIPS code into R
drug_list()	Get list of drugs available in the ARCOS database
not_pharmacies()	Get list of misidentified pharmacies by BUYER_DEA_NOs
pharm_cbsa()	Get the core-based statistical area GEOID for each pharmacy based on BUYER_DEA_NO (Only includes retail and chain pharmacy designations)

pharm_counties()	Get county GEOID for each pharmacy based on BUYER_DEA_NO (Only includes retail and chain pharmacy designations)
pharm_latlon()	Get latitude and longitude data for each pharmacy based on BUYER_DEA_NO (Only includes retail and chain pharmacy designations)
pharm_tracts()	Get census tract GEOID for each pharmacy based on BUYER_DEA_NO (Only includes retail and chain pharmacy designations)
pharmacy_raw()	Download raw prescription data for specified pharmacy (by BUYER_DEA_NO) into R
raw_data()	Download raw ARCOS data (Warning 130+ GB file) Warning: Not recommended to run in R due to server stability. If interested in the raw data, you can download via the link below.
reporter_addresses()	Get DEA designated addresses for each Reporter based on REPORTER_DEA_NO (Includes Manufacturers and Distributors)
state_population()	Get annual population for states between 2006 and 2012
summarized_county_annual()	Get annual summarized pill totals by county
summarized_county_monthly()	Get monthly summarized pill totals by county
total_distributors_county()	Get total pills for each distributor in a county
total_distributors_state()	Get total pills for each distributor in a state
total_manufacturers_county()	Get total pills for each manufacturer in a county
total_manufacturers_state()	Get total pills for each manufacturer in a state
total_pharmacies_county()	Get total pills for each pharmacy in a county
total_pharmacies_state()	Get total pills for each pharmacy in a state

**Health Crisis and Housing Market Effects - Evidence from the
U.S. Opioid Epidemic***

Walter D'Lima[†] Mark Thibodeau[‡]

June 19, 2020

ABSTRACT

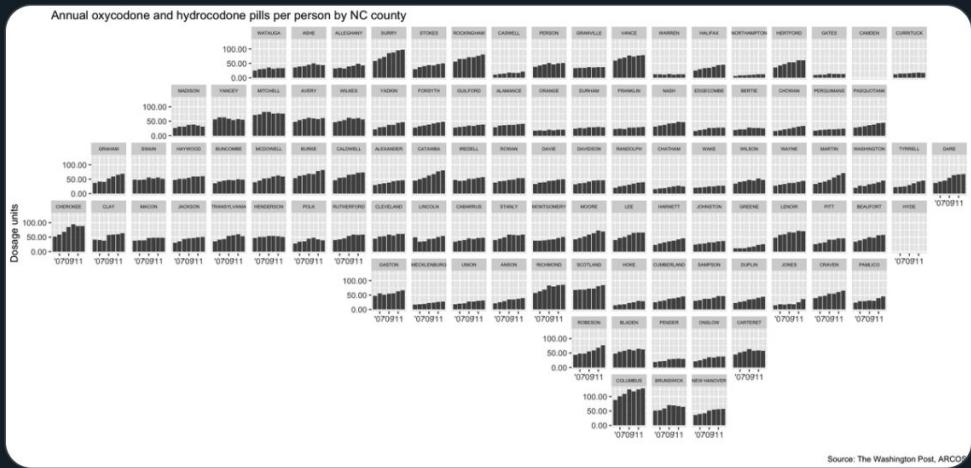

We present a view of housing market effects relating health crises to house prices. Using data on opioid prescriptions and repeat sales in Ohio, we find that house price changes around opioid dispensaries (pharmacies and practitioners) are negatively associated with the quantity of opioids dispensed and the magnitude of the effect dissipates with distance from opioid dispensing locations. The results are consistent across different measures of opioids dispensed. We present a series of robustness checks and show that the treatment effect is more pronounced around pharmacies that

Tyler Dukes ✅
@mtdukes

Far from perfect, but I was able to use the
@washingtonpost team's fantastic R package on opioid
data to produce a grid of per-person prescription rates for
each of NC's 100 counties from 2006-2012.

Pharmacies Owned by GOP Rep. Peddled Massive Number of Opioid Doses in Small Communities: Report

JERRY LAMBE | Aug 29th, 2019, 5:30 pm | 38

 Tweet  Share  reddit

Two Louisiana pharmacies owned by Republican Rep. **Ralph Abraham**, Clinic Pharmacy of Mangham and Adams Clinic Pharmacy of Winnsboro, sit just 12.5 miles apart and serve a combined community of approximately 6,000 people. Yet despite serving relatively sparse populations, the two pharmacies reportedly prescribed a total of 1,478,236 doses of opioid painkillers from 2006 to 2012, more than 35 doses per person, according to a report from the *Bayou Brief*.

Why A Tennessee Lawmaker Says His Company Tops The List Of Opioid Pharmacies

By BLAKE FARMER • AUG 12, 2019

 Share  Tweet  Email

State Senator Shane Reeves, R-Murfreesboro, is the founder and CEO of Twelve Stone Health Partner, which is registered with the state as a pharmacy but has very little resemblance to a retail storefront.

CREDIT BLAKE FARMER WPLN

State Senator Shane Reeves of Murfreesboro says he wasn't surprised to see his pharmacy as the top recipient of opioids in Tennessee — more than double the next highest pharmacy in the state according to a [Washington Post database](#).

Over a six year period, more than 45 million pain pills passed through what is now named Twelve Stone Health Partners. But Reeves also rejects that his

business contributed to the opioid epidemic.

problematic given their cavalier attitude towards Mallinckrodt's compliance obligations. One of their most highly compensated NAMs, Victor Borelli, engaged in a telling email exchange with one of his distributor contacts at Key Source Medical, Steve Cochrane, after Mr. Cochrane had received an overnight shipment of 1200 bottles of oxycodone from Mallinckrodt. Mr. Cochrane wrote: "Keep'em comin'! Flyin' out of here. It's like people are addicted to these things or something. Oh, wait, people are . . ." Mr. Borelli responded: "Just like Doritos keep eating. We'll make more." Ex. 58, Email Chain

OPIOID EPIDEMIC

New Federal Data Confirms What We Already Know: Opioid Distributions Inundated Appalachia

BY ASHTON MARRA · JULY 19, 2019 · ⓘ 5 MINUTE READ

[story](#)

Explaining two red flags techniques set by DEA

Andrew Ba Tran

Walgreens and other distributors had a statutory and regulatory obligation to maintain effective order monitoring systems to prevent the diversion of prescription opioid pills for non-medical use.

One sort of flag, as described by the DEA in a recent 2017 trial, is when a monthly order of oxycodone or hydrocodone exceeded the 12-month rolling average by double the amount.

Walgreen pharmacies exceeded that monthly criteria nearly 45,000 times—the most out of any other chain. That's more than five months per store, which is greater than any other chain plus independent stores.

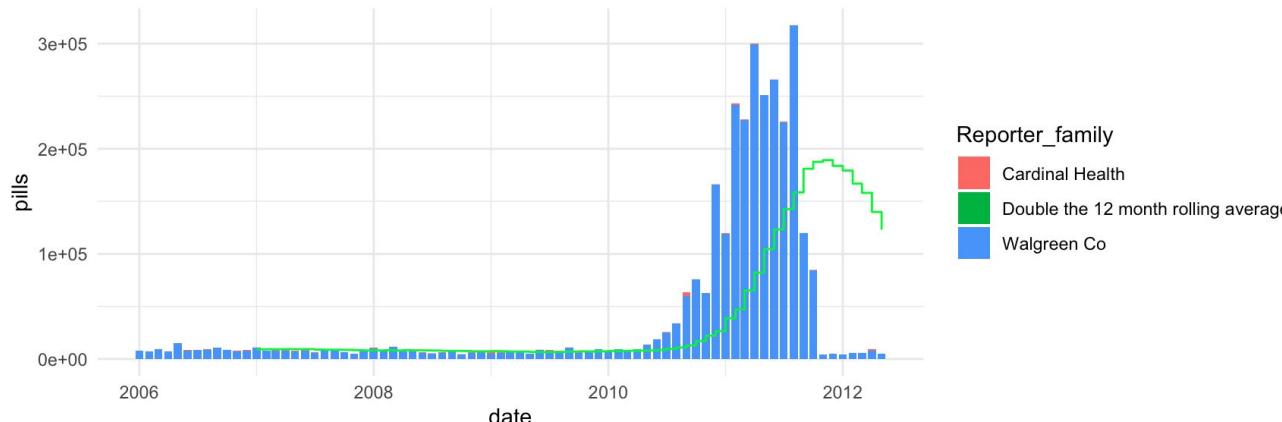

The purpose of such a system was to identify suspicious orders that should not be shipped unless the distributors' due diligence eliminated the suspicion of diversion, according to the DEA.

Within those flagged months, Walgreens distribution points shipped 160 million pills to more than 8,000 Walgreens pharmacies.

This particular Walgreens pharmacy in Oviedo was part of a half dozen pharmacies in Florida that were sanctioned by the DEA in 2011 for suspicious activity. In recent lawsuits, the DEA revealed five methods for detecting suspicious opioid ordering activity. This illustrates two of them.
